Hostinger Horizons: How to get started

A short guide introducing Hostinger Horizons AI-powered software development tool
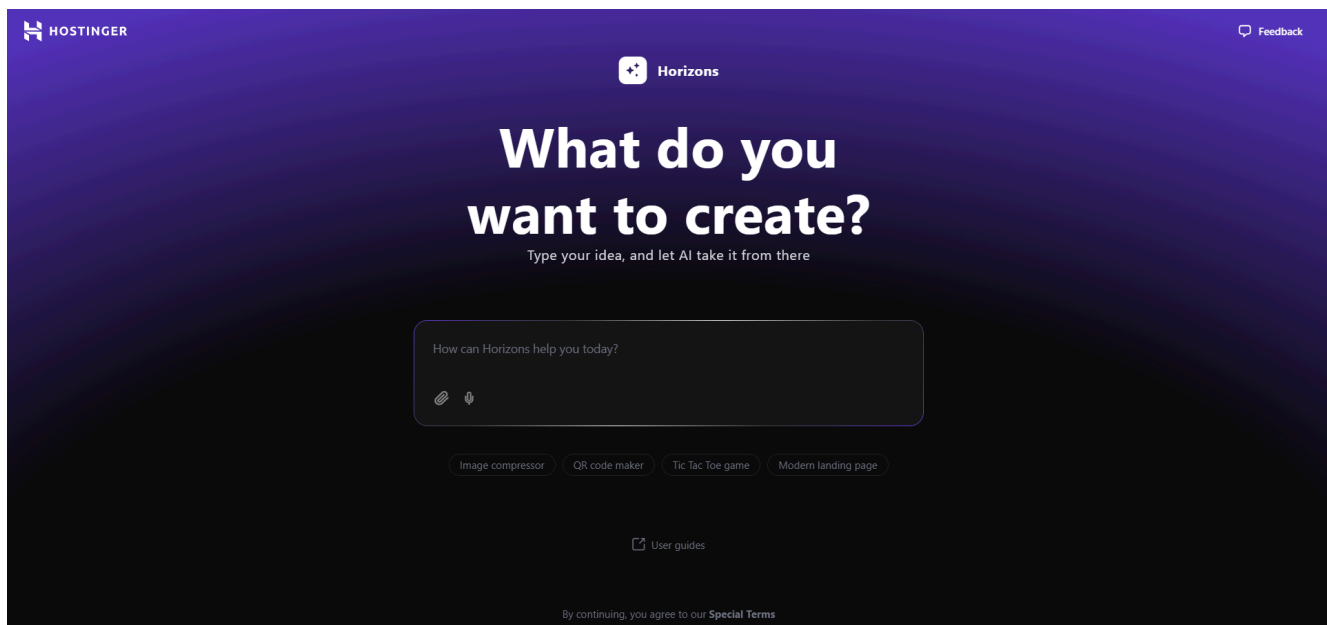

Updated this week

Table of contents ⌄

This article is a go-to guide for those interested in building their next web application. It is beneficial in helping you get the most out of Hostinger Horizons. If you have already started building your app, this guide should also help you get the most out of Hostinger Horizons product.
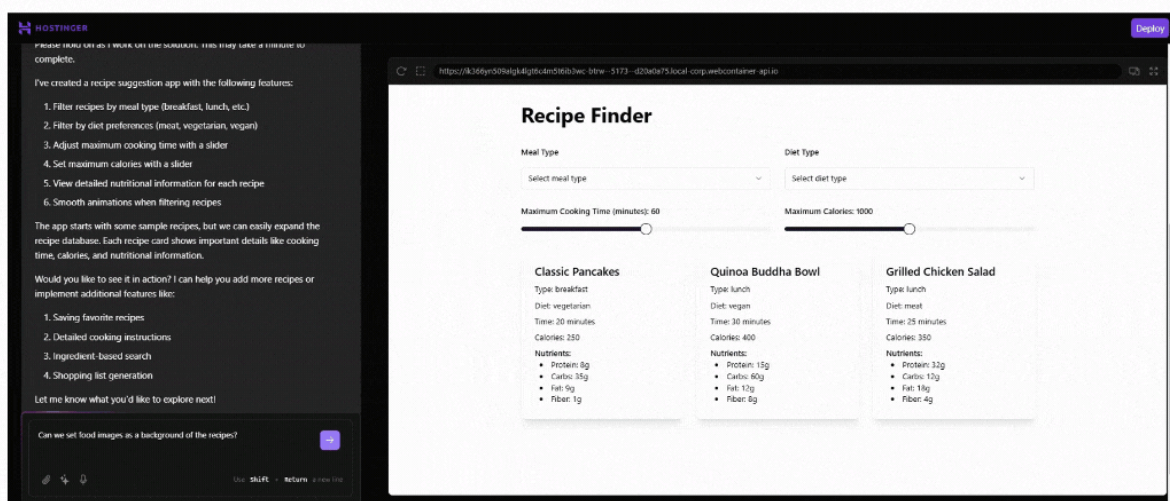

What is Hostinger Horizons?

[Hostinger Horizons](#) is an AI-powered software development tool that lets anyone create custom web apps in minutes—no coding required.
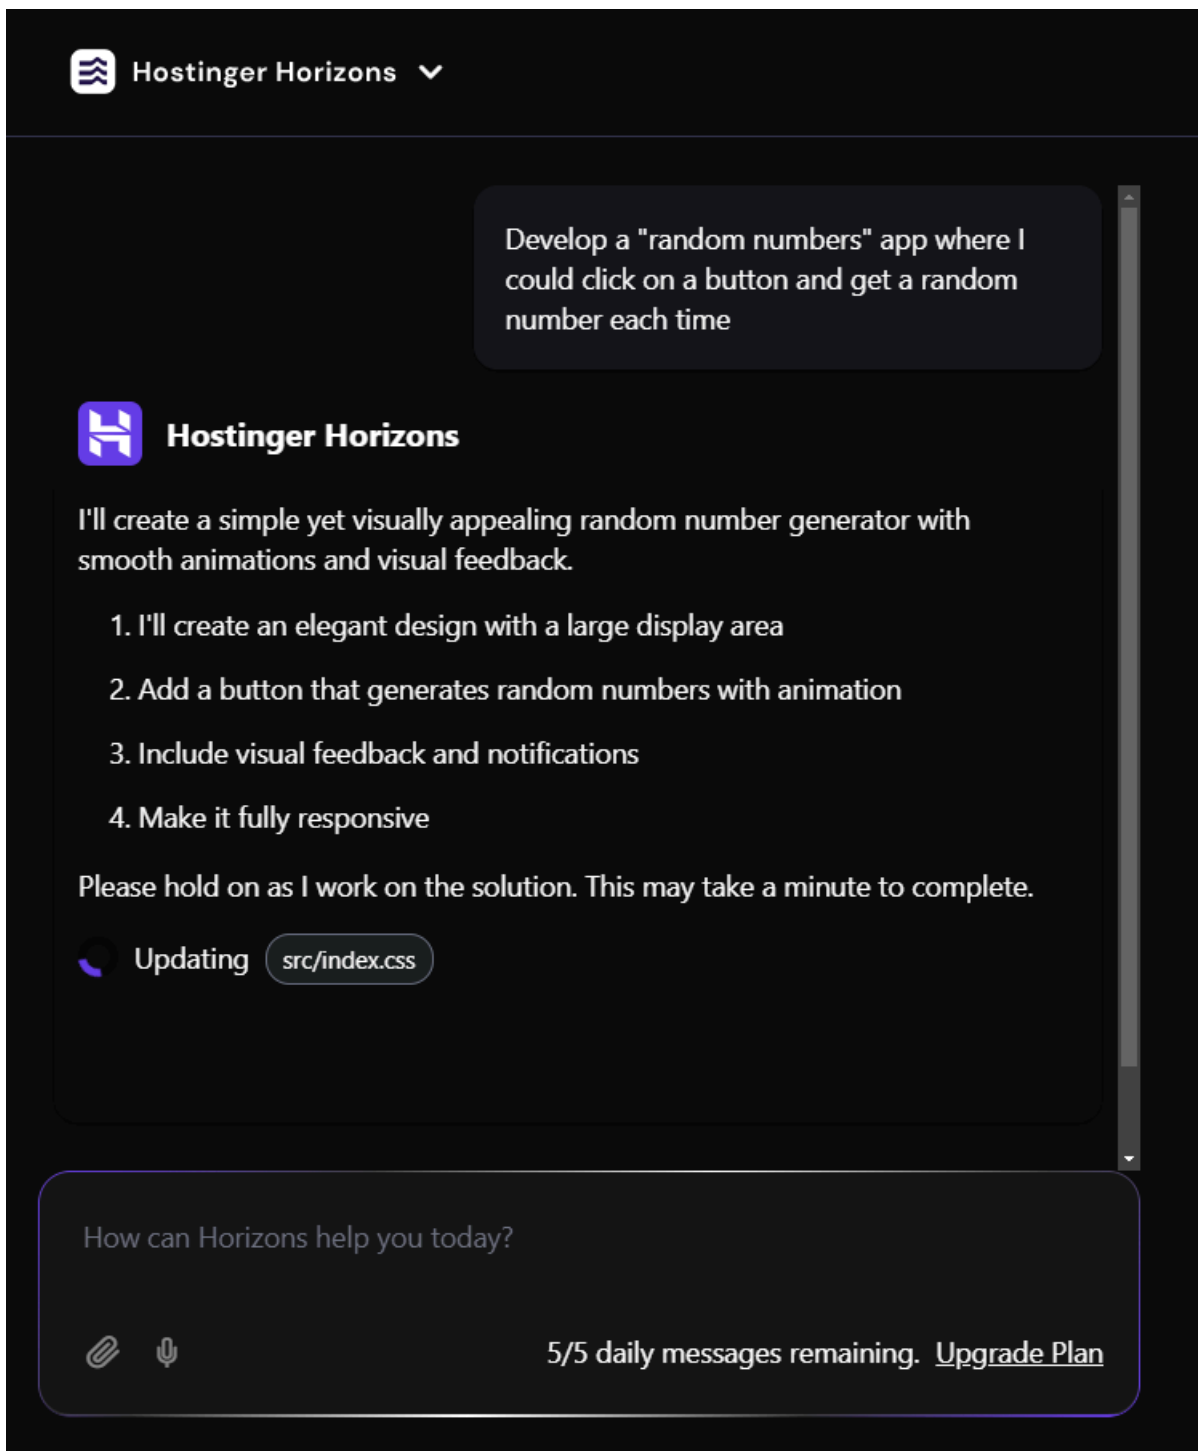

Note: It is important to note that Hostinger Horizons is a tool that helps you build web software. Complex software or applications will require smart prompting by the user and some understanding of web development.
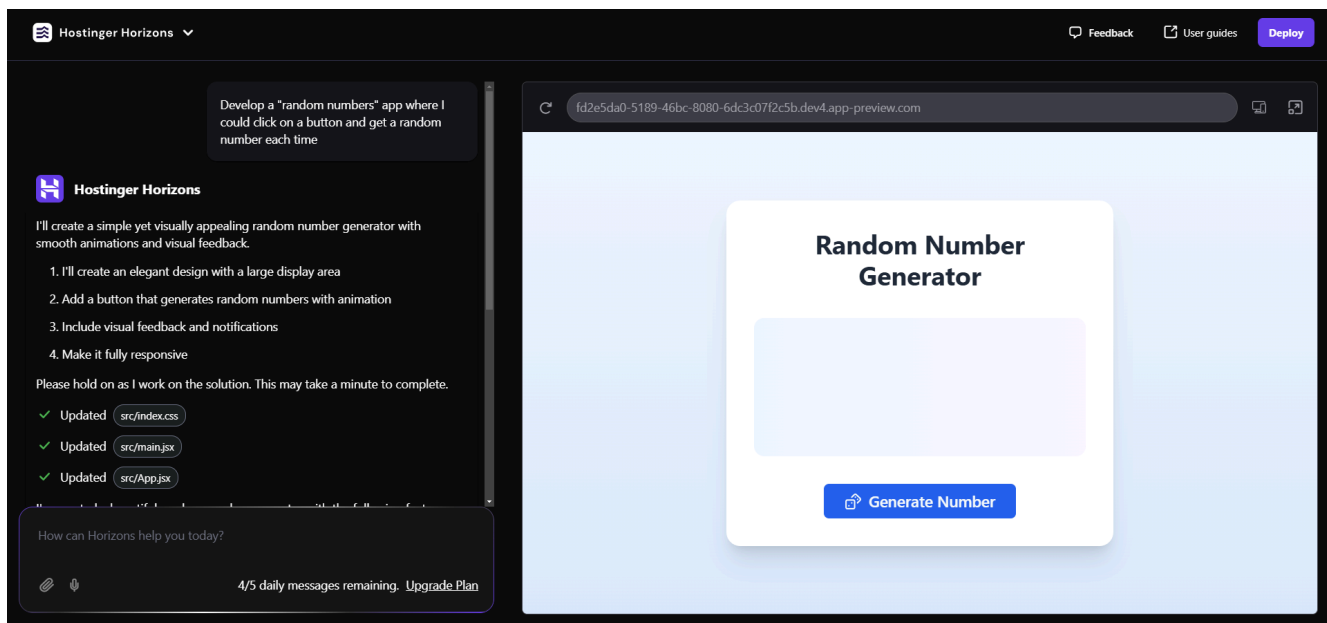

How does Hostinger Horizons work?

To start building with Hostinger Horizons, you can prompt Hostinger Horizons by telling it what you want to create. In the example below, you can see that one can create an app with just 1 sentence:
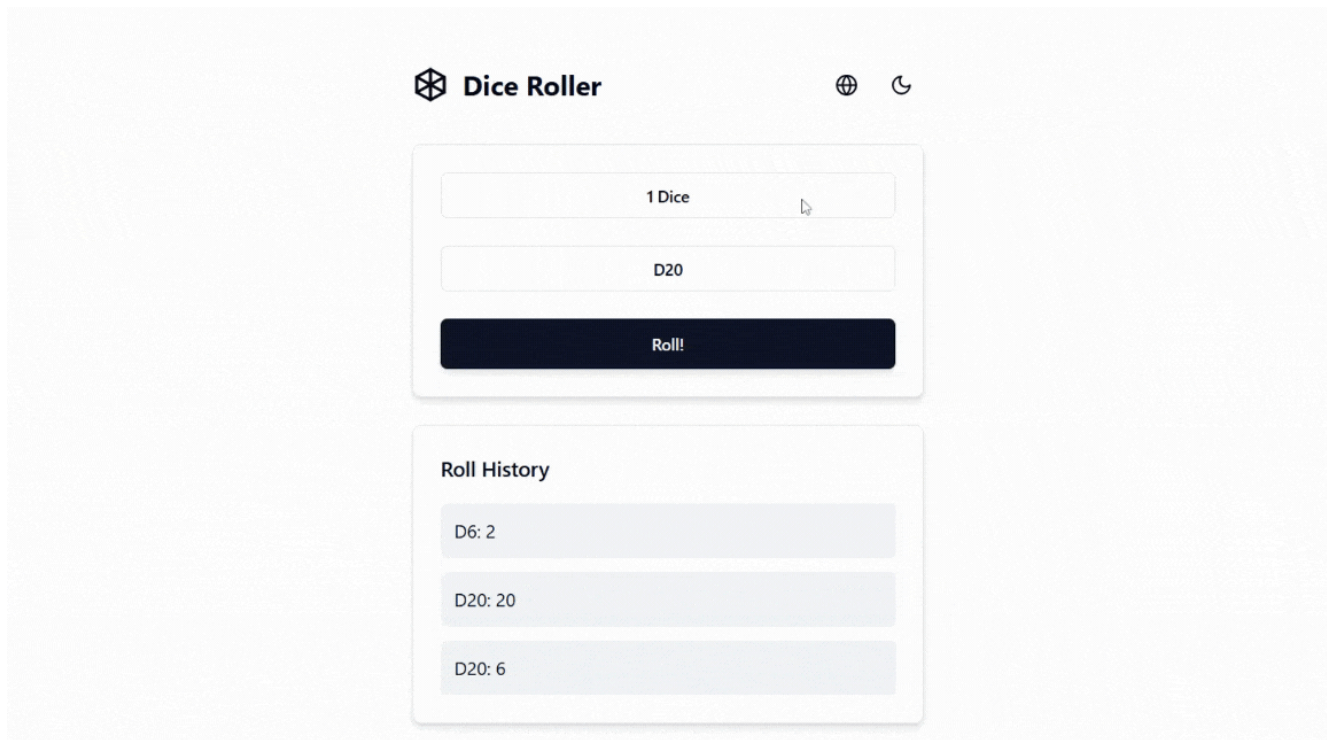

However, you can improve Hostinger Horizons' performance and get better results by providing more details and specifying what you are looking to build. Feel free to use your own words to provide as much more detail as possible.
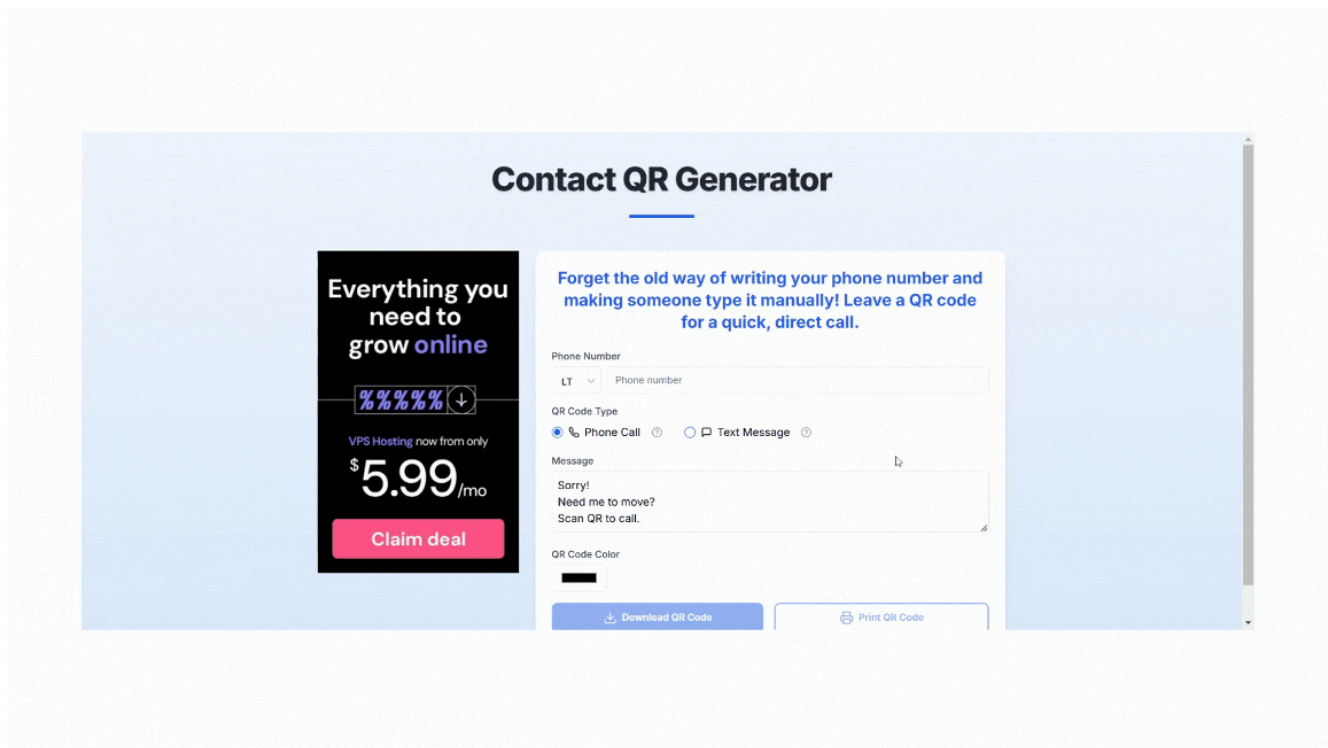

Note: To ensure you are using Hostinger Horizons more effectively, ensure your prompt is high quality. The more specificity you provide, the better your results will be. However, feel free to experiment. Be vague and let Horizons surprise you.

Can I build the whole application with Hostinger Horizons?

Absolutely! See the examples below of many users who successfully built, deployed, and launched using Hostinger Horizons.

Check out our step-by-step [tutorial on creating a web app with Hostinger Horizons](#) for more details.

## Do I need to know how to code to use Hostinger Horizons?

You do not need to know how to code to use Hostinger Horizons. However, you need to be clear about what you want to build, how you want it to appear to the end users, and what its success should look like.

If you are aware of certain technologies or tools you want the web app to use, you can ask Horizons to use them in the prompt. If not, Horizons will just suggest technologies to use itself.
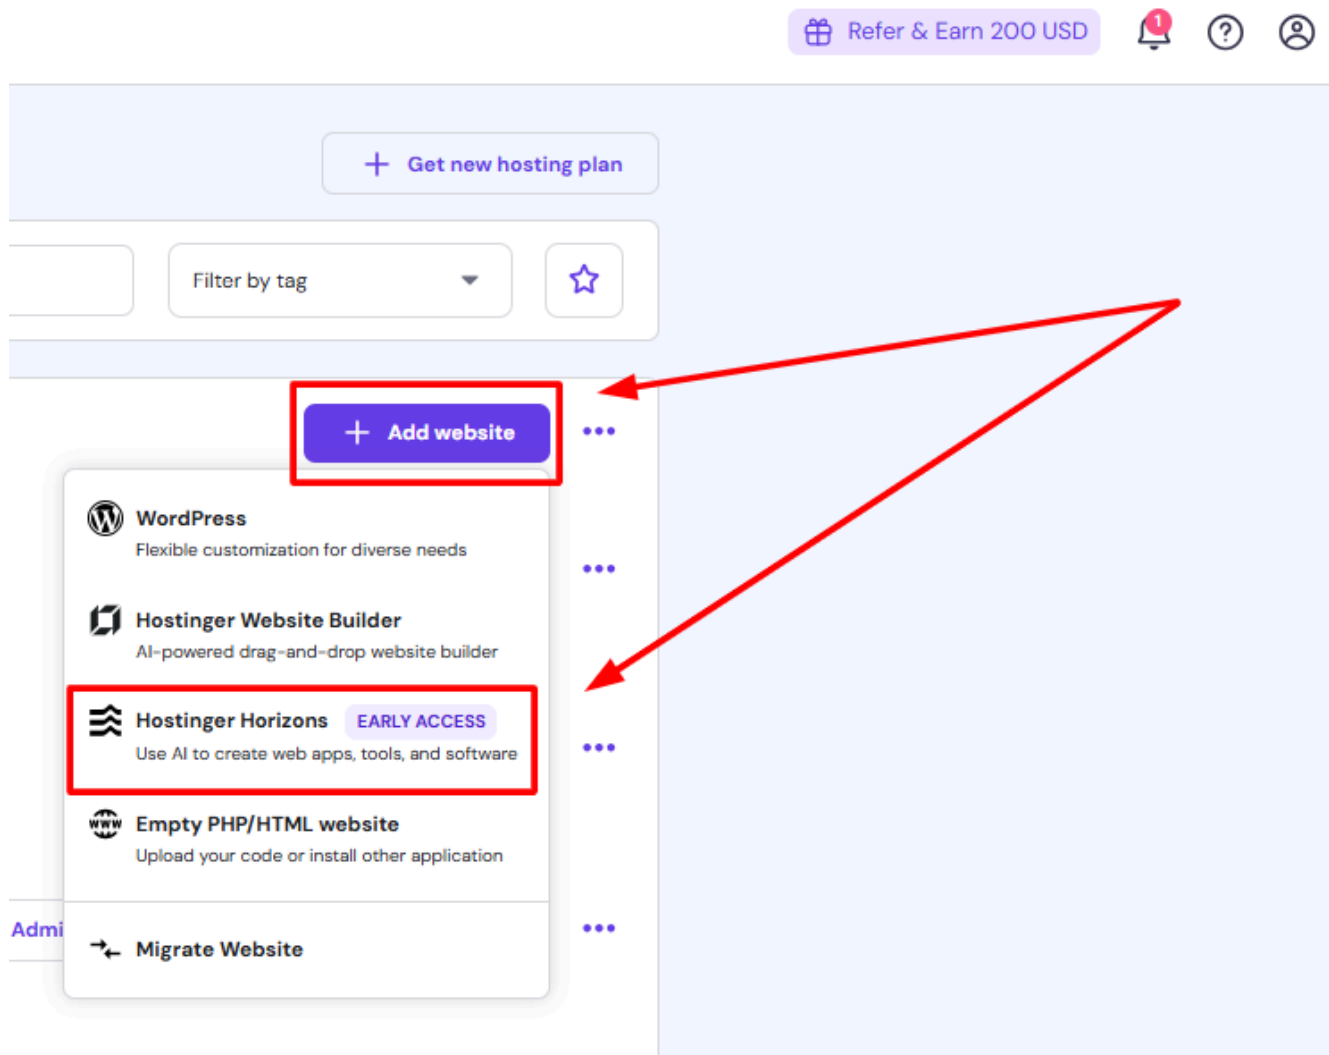

Give it a try!

1. Your first message should include 2–5 sentences providing informational context for the web application you would like to create.
2. Next prompts should include requests for 1 change at a time.
3. You can find more detailed instructions on how to prompt and deploy an app using Hostinger Horizons in [How to deploy your Hostinger Horizons app](#) article.

To get started, access your Hostinger Horizons solution, go to your hPanel and click on **Websites > Websites List** in the left-hand navigation menu:

After that, you'll see the **Add Website** button on the right side. Click on it and select **Horizons**:

And that's it! The Horizons solution will open and you will be able to get started with Horizons.
